

About ASPEN

Windows-Based

ASPEN is Charter's newest Microsoft Windows-based product in their line of business management solutions, and is the result of three year's development involving dealer input.

Today's Technology

ASPEN was built using Microsoft .NET and SQL Server to offer users strong security, a reliable, manageable IT infrastructure, and ease of integration with other Microsoft applications.

Scalable Solution

ASPEN is reasonably priced and scalable to meet the needs of both multi and single-store dealerships requiring more sophisticated functionality.

User-Friendly

ASPEN's similar look and feel to popular Microsoft programs allows for a smoother user transition than from text-based systems.

Highly Configurable System Settings for Users and Functions

ASPEN offers highly configurable user settings to manage user roles and secure data. Use system settings to define customer data, pricing structures, chart of accounts and more.
