
NEW! Signature Capturing Capabilities for ASPEN Business Management System

Charter Software is pleased to announce the addition of Signature Capture for their Windows-based business management system, ASPEN. This new capability provides dealers using the ASPEN system with a cost-effective, electronic alternative to storing paper documents. Charter Software President Anne Salemo says, "As our society moves toward a paperless, more 'green' environment, Charter Software is proud to be able to offer cost-effective, environmentally-friendly business solutions to meet equipment dealers' document handling needs."

Using a Signature Capture device, dealers can have customers sign computerized invoices and other documents using a digital pad in lieu of the traditional method of obtaining customer's signatures manually and storing extensive quantities of paper documents. The dealer has the option to configure the Signature Capture by payment method to allow multiple signatures or just one signature per type of document. The signed documents are then securely stored within the ASPEN business management system and can be retrieved and viewed at any dealership location connected to the system.

See more information about our ASPEN business management system. Email us to set up a free demo! ASPEN customers wishing to add this functionality, please contact Dave Brauer.
