

New Integration Saves Keystrokes, Reduces Errors and Improves Security for Equipment Dealers

Littleton,
CO – July 14, 2010

We are pleased to announce the addition of new features to ASPEN, our Windows-based business management system. Bobcat Bass II Interface, a parts catalog interface for Bobcat Dealers, and ChargeltPro, a powerful credit card interface for US dealers, are both new features that will aid equipment dealers in increasing efficiency when used with ASPEN.

Bobcat Bass II Interface saves Bobcat dealers time and keystrokes by allowing them to see their part information stored in ASPEN from within Bobcat BASS II, a web-based application where they can access the latest information on all models of Bobcat compact equipment. From BASS II, they can transfer picklists to their ASPEN invoices, parts orders and/or service work orders, saving an enormous amount of time otherwise spent rekeying.

ChargeltPro is a seamless, secure credit card processing solution by Payment Processing Partners, a leading payment processing provider and a Charter Software partner. Using Charter's new ChargeltPro Interface, dealers can process credit card transactions through ASPEN's Point of Sale screen. "ChargeltPro's payment processing and comprehensive reporting options will provide Charter's customers with added functionality and ease of use, says Rose Calander, Sales Development Director, Payment Processing Partners. "ChargeltPro's compliance with PCI standards for storing credit information was a huge factor in our decision to partner with them," says Charter Software President Anne Salemo. "Their extensive security features and validations make it the most secure credit card processing software available to our customers, and we are pleased to add it to

our offerings.”
